

EN | Solutions for the dental laboratory

Catalogue **2022**

Progress, constantly. Creating value, to make the quality of the products accessible to the world. With creativity, and especially with the ability to transform every challenge into a development opportunity. To dynamically seize the market trends and understand the needs of partners, clients and customers. To make our solutions accessible worldwide. All this is the basis of Zhermack's growth, and since its foundation, over 40 years ago, the company has never ceased to develop and grow.

The clarity of the dream continues to drive Zhermack along this road, to "make you feel confident in everyday life". This is Zhermack's goal and philosophy of life. And it is a dream that is realised every day. Because everything aims at transmitting confidence. The way is charted with the awareness that Zhermack must contribute to improve oral health throughout the world, now and for future generations.

The contribution of Zhermack to people's oral health stems from the value that is given to the quality of its products. A quality that is born from scientific research and from the commitment to continuous education, to reach and always set new goals that contribute to improve the lives of people all over the world.

«Zhermack is a company that is committed with constancy to creating value, to make the quality of its products accessible worldwide. Zhermack's success resides in its ability to be creative, to transform every challenge into a growth opportunity, and to be dynamic, in order to seize the market trends and understand the needs of partners, clients and end customers».

> Paolo Ambrosini General Manager

Our solutions.

Specific products and solutions for the dental laboratory, conceived exploiting the skills acquired with materials for the dental practice. Starting from development and production of duplication silicones and masks, Zhermack has extended its offer with quality products such as dental stones, resins and investments to satisfy the needs of the numerous laboratory processes involved in the fabrication of fixed and removable prostheses. A system to accompany lab technicians in their daily work.

We produce measurable results.

Zhermack directly manages all the working stages - from formulation to packaging, from the production of raw materials to the mixing - to produce all its solutions. Validated and controlled processes are the guarantee with which Zhermack is able to offer products that are constant in their characteristics, as well as certified in guality.

This, together with the technological and process integration adopted over time, is what makes Zhermack one of the major producers in the field of dental products.

Quality, certified. Year after year.

Zhermack meets the needs of its customers, maintaining and improving its Quality Management System day after day. Zhermack started its certification process in 1993.

Today the global regulatory framework is very complex and, to simplify access to the global market for its products, Zhermack has taken a big step in 2018: EN ISO 13485:2016 and MDSAP (Medical Device Single Audit Program) certifications.

Solutions for the dental laboratory

Hygiene

Impressions arriving from the dental practice are often contaminated with saliva and blood. Correct disinfection is vital to protect the health of laboratory technicians. Zhermack **disinfectants** with a **broad spectrum of action** are **enhanced with surfactants to improve the flow of the stone during pouring**.

- Zeta 7 Spray (with surfactants)
- Zeta 7 Solution (without surfactants)

Model preparation

An accurate model is the basis of every well-made prosthesis.

Zhermack offers a **complete system** of impression materials, materials for models and equipment, all developed to be used as a system to ensure maximum precision. It also offers a series of scannable products to facilitate the lab technician with **CAD/CAM technology**.

- Platinum
- Zetalabor and Titanium
- Elite Double
- Gingifast
- Elite Dental Stones

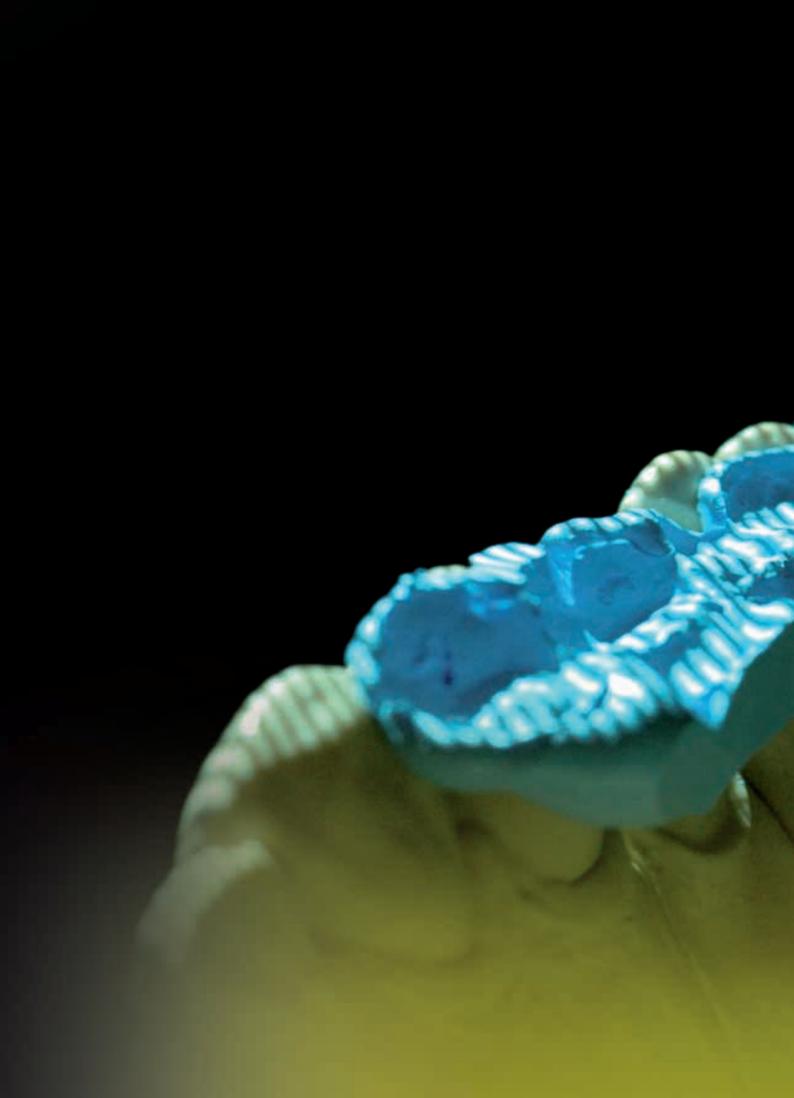

Prosthesis preparation

The prosthodontic market requires ever more speed and precision. Thanks to more than 40 years' experience, Zhermack has developed a wide offer to **optimise time in the laboratory**, without compromising on quality.

- Elite LC Tray
- Acrytemp
- Elite Vest

9

CAD/CAM solutions

The CAD/CAM solutions developed by Zhermack combine traditional techniques (impression taking, model preparation, prosthesis) with the most innovative digital techniques. Saving time in data acquisition, simplifying and improving the quality of CAD/CAM processes.

The Zhermack offer includes a wide range of scannable silicones and stones readable without using reflective sprays.

A-Silicone

Platinum 75 CAD is an addition silicone recommended for all CAD/CAM users for making scannable bite regulation keys in the articulator.

Characteristics

- Accurate reproduction of details
- 75 Shore A hardness
- Mixing ratio 1:1

Platinum 75 CAD

Advantages

- Quicker working time to improve efficiency in the laboratory
- Easy to finish, including with bur
- Scannable without using reflective sprays

Platinum 75 CAD scan

Mixing time (min:s)	Working time* (min:s)	Setting time* (min:s)	Detail reproduction (μm)	Elastic recovery	Strain in compression	Linear dimensional change (after 24 h)	Hardness (Shore A after 24 h)	Heat resistance
0:30	1:00	7:00	20	> 99.5 %	< 1 %	0.05 %	75	200 °C

*The times mentioned above are intended from the start of the mixing phase at 23 °C (73 °F).

Platinum 75 CAD - A-Silicone for bite registration

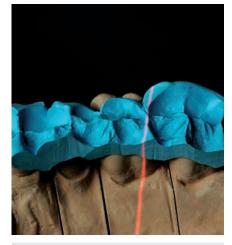

Occlufast CAD is a scannable addition silicone for accurate bite registration.

Occlufast CAD is the solution developed for practitioners looking for a product that facilitates digital work-flow access, by improving communication with the dental technician.

Characteristics

- Scannability*
- Dimensional stability, up to 7 days

Occlufast CAD

Advantages

- Scannability favours digital work-flow access
- Dimensional stability makes it possible to maintain the accuracy of the bite registration for up to 7 days from the time it is taken, even once it has been disinfected using products containing quaternary ammonium salts, mixtures of alcohol and surface tension reducers

Occlufast CAD scan

Mixing ratio Base: Catalyst	Working time** (min:s)	Setting time** (min:s)	Detail reproduction (µm)	Linear dimensional change (after 24 h)	Hardness (Shore A)

	Code	Packag					
III t	C200800	2 x 50 ml cartridges (Base + Catalyst) + 12 mixing tips (medium)					

*Occlufast CAD can be scanned using optical scanners (structured light and laser) and CBCT without using opacifier powders.

Type 4 stones

Elite Master and **Elite Rock** are type 4 stones to make scannable master models without using reflective sprays.

Elite Master is reinforced with resin particles, making the material easy to work and resistant to chipping.

Elite Rock is an extra hard stone with high compressive strength, recommended for making master models for fixed prostheses.

Elite Master is scannable in all colours, Elite Rock only in Silver Grey.

Characteristics

Elite Master:

- Scannable without using reflective sprays
- Formaldehyde free
- Resistant to chipping Elite Rock:
- · Also available in fast version to optimise working time
- · Low expansion, even after 48 hours
- Accurate reproduction of details

Advantages

- Time savings in data acquisition with optical scanners
- Greater precision compared to use of reflective sprays
- Cleaner environment

More details on page 22

Gingifast CAD is a scannable fluid addition silicone, suitable for reproducing gingival morphology on models.

The elastic version with high tear resistance is recommended in the presence of undercuts or very thin thicknesses. The rigid version is ideal for implant prosthesis applications.

Characteristic

- Two hardness versions: Elastic 40 Shore A, Rigid 70 Shore A
- Rapid working times
- Mixing ratio 1:1

Gingifast CAD Elastic and Rigid

Advantages

- Time savings in data acquisition with CAD/CAM
- Greater precision compared to use of reflective sprays
- Compatible with both direct and indirect techniques
- Reduction of waste, thanks to the smaller tips

Model preparation

An accurate model is the basis of every well-made prosthesis. Possible errors during this phase have repercussions on subsequent phases and are extremely difficult to eliminate.

Sensitive to the needs of lab technicians, Zhermack has designed a system of laboratory and impression materials able to work in synergy to obtain accurate models.

Model preparation Stone models

The choice of material to develop the model contributes to the success of the prosthesis. The types 3 and 4 stones in the Elite range are formulated, developed and produced in-house by Zhermack which controls the various phases of the production process to offer high quality constant standards.

Available in a wide range of colours and different packs, Zhermack stones can meet the main diverse needs of the laboratory.

They are compatible with the most commonly used impression materials present on the market (including polyethers and hydrocolloids) and are formulated to deliver the best performance when used in combination with Zhermack materials.

Dental stones classification

The international regulation 6873:2013 classifies dental stones in different types, based on their linear setting expansion and compressive strength.

Higher type does not always mean higher quality for a stone. Type 5 stones, for example, are characterized by a high compressive strength but have also a high expansion, thus they are suitable for specific applications only. Type 3 and 4 stones are instead the best for the dental use, because characterized by high compressive strength and

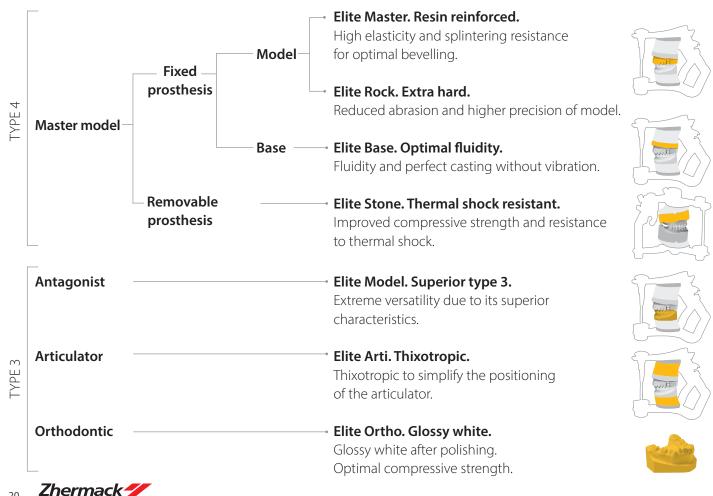

low expansion that allow a higher dimensional stability over time and therefore precision in the reproduction of detail.

Туре		Linear setting %	Compressiv MI			
	2	h	24	4 h	1	h
	min.	max.	min.	max.	min.	max.
1	0.00	0.15	-	-	4.0	8.0

Zhermack dental stones

A stone for every application

For fixed prostheses

Stone for bases | Elite Base

- Optimised to be used in combination
 with master model → same expansion (type 4)
- Easy to cast \rightarrow fluid

Stone for master model | Elite Rock or Elite Master

- Accurate reproduction of details \rightarrow low expansion
- Chamfering without splintering → resin particles
- Hard stone \rightarrow compressive strength

Stone for antagonist | Elite Model

- Cheaper than master model → type 3
- Hard stone \rightarrow compressive strength

Stone for articulator | Elite Arti

- Maintain correct occlusion → low expansion
- Simplifying positioning in the articulator → thixotropic
- Perfect fixing with antagonist → adhesion

For removable prostheses

Stone for articulator | Elite Arti

- Maintain correct occlusion → low expansion
- Simplify positioning in the articulator \rightarrow thixotropic
- Perfect fixing with antagonis \rightarrow adhesion

Stone for master model | Elite Stone

- To be used at high temperature → resistant to thermal shocks
- To be used with frameworks → wear resistance

Elite Master | Elite Rock | Elite Base | Elite Stone

Type 4 stones for master models and bases

Model preparation / Stone models

Type 4 stones have high compressive strength and low expansion, ideal for making master models. Each stone developed by Zhermack has specific technical characteristics for each individual application.

Elite Master is the stone for master models in fixed prosthesis applications with resin particles, for chamfering without splintering. **Elite Rock** is an extra hard stone for master models in fixed prosthesis applications.

Elite Base has excellent fluidity for preparation of bases, including without vibrator.

Elite Stone is a stone specifically conceived for master models in removable prostheses, resistant to thermal shock and abrasion from frameworks.

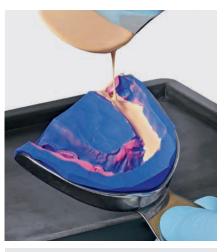

Thanks to its special formula optimised for reading with CAD/CAM systems, models made with Elite Master (in all colours) and Elite Rock (Silver Grey) are scannable without using reflective sprays.

Elite Master

Characteristics

- Low expansion, even after 48 hours
- Accurate reproduction of detail
- "Fast" version to save time (Elite Rock) Elite Master:
- Formaldehyde free
- Resistant to chipping

Elite Rock

Advantages

- Elite Master: chamfering without splintering, thanks to the high resistance given by the resin particles incorporated in the stone
- Thixotropic to simplify fabrication of the model
- Elite Base: high fluidity, even without vibration

Elite Base

Type 3 stones for antagonists

Elite Model is a high quality type 3 stone indicated for making antagonists and filling flasks in removable prosthesis applications with heat-curing resins.

Characteristics

- Low expansion
- High mechanical characteristics
- Universal use

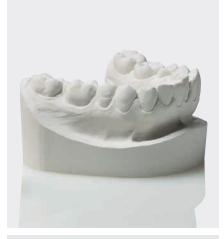

Advantages

- Model fabrication facilitated by the high thixotropy
- Extreme versatility due to its superior characteristics compared to other stones of the same type

Elite Transparent is a transparent fluid two-component

addition silicone.

Formulated for making transparent silicone masks in the laboratory for composites and light-curing resins.

Characteristics

- Highly transparent
- Low viscosity
- High final hardness 72 Shore A

Advantages

- Shorter working times
- Composites or resins act on more compact surfaces without dispersion layer, thanks to the light curing in an oxygen free atmosphere
- Easy and quick to apply
- Possibility to retain the mask for future use

Guide to use

A-Silicones vs C-Silicones

Model preparation / Masks

Addition silicones

- Excellent dimensional stability
- Resistant to heat up to 200°C
- Excellent surface definition

Condensation silicones

- Lower dimensional stability
- Resistant to heat up to 100°C
- Lower surface quality

Zetalabor (80 Shore A) Titanium (90 Shore A)

Indicated for short processes and use with heat-curing and self-curing resins.

Platinum 75 CAD Platinum 85 TOUCH Platinum 85 Platinum 95

Indicated for lengthy processes (e.g. work on implants with diagnostic wax-up), processes requiring high definition and detail reproduction (e.g. veneers), use with thermoplastic materials with a high curing temperature, heat-cured resins and self-curing resins.

Examples of application

Removable prosthesis with self-curing resin

Removable prosthesis complete denture with hot curing resin

Removable prosthesis complete denture with cold-curing resin

Platinum is a high precision addition silicone available in 95, 85, 85 TOUCH or 75 CAD versions. All silicones in the line are characterised by excellent dimensional stability, short working times and ease of use.

Zhermack offers a complete system of putty silicones with different hardnesses, delivering high performance in numerous applications, including dental aesthetics. To satisfy the various needs of daily practice, Platinum 75 CAD silicone is designed for scanning with CAD/CAM systems and is ideal in combination with Platinum 95 for excellent reproduction of details. Recommended to make masks and counter-moulds.

Platinum 85

Characteristics

- Availability in a wide range of hardnesses
- Accurate reproduction of details
- Resistant to heat up to 200° C
- Mixing ratio 1:1

Platinum 85 TOUCH

Platinum 95

Advantages

- Can be used for long processes (for example, implants with diagnostic wax-up) without altering the dimensional references
- Can be used with thermoplastic materials, thanks to heat resistance of up to 200° C
- Easy to work, including with a bur

C-Silicones

Model preparation / Masks

Designed for the dental laboratory, **Zetalabor** and **Titanium** condensation silicones are characterised by high hardness and good mechanical properties.

They can be used in various applications requiring short times and not excessively high working temperatures. Zetalabor and Titanium are recommended for counter-moulds in removable prosthesis applications, masks for creating artificial gums using the indirect technique, moulds for preparation self-curing resins and numerous other applications. For more than 35 years, their ease of use has helped speed up laboratory procedures and improve the everyday performance of lab technicians.

Indurent LAB is the gel catalyst completing the range. Its characteristic red colour makes it easy to recognise when the mixture is homogeneous.

Zetalabor

Characteristics

- Resistant to heat up to 100° C
- Good precision
- Silicones to mix with the gel catalyst only

Advantages

- Time saving
- Excellent quality/price ratio
- For use with hot and cold resin techniques

Zetalabor | Titanium

User's guide

Model preparation / Masks

Zetalabor - Mixing technique

1. Take one or more measures of Zetalabor (note: the measuring spoon must be filled flush with the surface)

4. Fold the material onto itself

2. Spread Zetalabor on the palm of your hand and impress the rim of the measuring spoon onto the material as many times as the measures used

Mix together using your fingertips (to avoid heating the material), forming small S shapes

3. For each measure, spread two strips of Zhermack Indurent LAB catalyst the same length as the measure, i.e. about 4 cm

6. Mix until the material is even in colour, without stripes

Zetalabor - Injectable technique for temporary restorations

Model preparation Duplication

Interpreting the needs of lab technicians, Zhermack R&D laboratories have developed Elite Double, a wide range of duplication silicones characterised by accurate reproduction of details and excellent dimensional stability.

The high elasticity and high resistance to tearing make removal of the model from the silicone easy and safe.

For excellent results even in the most complex situations.

A-SILICONES	
Elite Double 8	52
Elite Double 16 Fast	52
Elite Double 22	52
Elite Double 22 Fast	52
Elite Double 22 Extra Fast	52
Elite Double 32	52
Elite Double 32 Fast	52

The **Elite Double** line includes a wide range of duplication silicones. Designed to meet the lab technician's different needs in both fixed and removable prosthesis applications. The range consists of 7 products.

Elite Double has different colours, four different final hardnesses and three setting times: normal, fast and extra fast, the latter formulated specifically for automatic mixers. Elite Double retains high and constant fluidity throughout the working time, delivering a homogeneous bubble-free result.

Characteristics

- Resistance to stretching and tearing, including with thin thicknesses
- Accurate reproduction of detail
- High fluidity
- High dimensional stability over time
- High elastic recovery

Elite Double 22 Fast

Elite Double 16 Fast

Advantages

- Optimisation of working times, particularly when compared with duplication with hydrocolloids (setting time 5:00, 10:00, 20:00)
- The model can be duplicated a number of times, thanks to the dimensional stability over time and high elastic recovery
- Compatible with stones, polyurethane resins, acrylic resins and phosphate and alcohol-based investments
- High fluidity: does not require mixing in a vacuum

ACCESSORIES

Model preparation Gingival reproduction

To reproduce artificial gengiva on a model, Zhermack offers top quality, precise polyvinylsiloxane products with long stability to facilitate work in the laboratory.

They retain their characteristics unaltered throughout all phases of the process, giving the lab technician more peace of mind.

A-SILICONES

Gingifast Elastic	62
Gingifast Rigid	62
Gingifast CAD Elastic	62
Gingifast CAD Rigid	62

Gingifast addition silicones are conceived to reproduce gingival morphology on models in fixed prosthesis and implant applications.

Zhermack proposes the most suitable gum mask for all types of application.

Gingifast Elastic guarantees excellent aesthetic results, thanks to its translucence and the presence of fibrils to give a natural effect. Particularly suitable in the presence of undercuts and thin thicknesses.

Gingifast Rigid is indicated for the direct technique. Thanks to its balanced hardness, it can be worked easily with burs and is the top product in the field of implant prosthetics.

Gingifast CAD, a scannable fluid silicone available in two versions, Rigid and Elastic, completes the range. Scannable and readable without requiring reflective sprays, it is conceived for maximum performance in acquiring 3D data, saving time, simplifying processes and improving quality.

Gingifast Rigid - direct technique

Characteristics

- Various hardnesses: Elastic 40 Shore A, Rigid 70 Shore A
- Setting time: 10:00
- Mixing ratio 1:1

Advantages

- Compatible with the various techniques used to make artificial gums (direct and indirect)
- Excellent aesthetic results
- With the Gingifast CAD formula, very small mixing tips can be used reducing silicone waste

Prosthesis preparation

Constant research, continuous improvement and years of experience in prosthodontics have enabled Zhermack to develop a system of high quality laboratory solutions that work in synergy to create accurate and aesthetic prostheses.

Zhermack's resins and investments simplify the work of the lab technician and allow high performance prostheses to be made easily, quickly and cheaply.

Prosthesis preparation

Custom trays

For custom trays and bases for mounting teeth, Zhermack offers different resins adaptable to the main dental laboratory needs.

Easy and quick to use, Elite LC Tray is the line of light-curing resin plates to optimise working times without compromising on quality.

LIGHT-CURING RESINS				
Elite LC Tray	72			
Elite LC Tray ROUND	72			

Elite LC Tray | Elite LC Tray ROUND

Light-curing resins

Prosthesis preparation / Custom trays

Elite LC Tray is a line of light-curing resin plates for custom impression trays. Also indicated for making bases for mounting teeth and bite plates in removable prosthesis modeling.

Elite LC Tray can be used to make bases and custom trays of various sizes to meet the main requirements in this application. **Elite LC Tray ROUND** is particularly indicated for laboratories wanting medium-sized ergonomic plates.

Characteristics

- Cured with either halogen or UV light (3 5 minutes)
- Stable to daylight or artificial light for about 20:00
- Available in three colours: blue, white and pink
- Minimum shrinkage after curing

Advantages

- Easy to model, not sticky
- Quick, saves time with respect to traditional self-curing resins
- Uniform thickness

Temporary restorations

Acrytemp is Zhermack's self-curing bis-acryl resin for short- and long-term temporary restorations. It comes in self-mixing cartridges, for proper and rapid application.

Its failure resistance and natural fluorescence help to achieve a reliable and aesthetic result, to satisfy the practitioner and the patient alike.

BISACRYLIC SELF-CURING RESIN Acrytemp 76

Acrytemp is a self-curing bis-acryl resin for short- and-longterm temporary restorations with a high failure resistance.

The flexural and compressive strength of **Acrytemp** allow the temporary restoration to resist masticatory loads, which helps reduce the risk of breakage and therefore the failure of the restoration. It also offers limited curing shrinkage and a limited exothermic reaction during the setting phase.

Acrytemp is methyl methacrylate-free and it possesses good chromatic stability and natural fluorescence.

Acrytemp

Characteristics*

- High failure resistance
- Limited cure shrinkage
- Limited exothermic reaction during curing
- Absence of methyl methacrylate
- Natural fluorescence
- Good chromatic stability
- Available in 5 different shades

Advantages

- Low failure risk
- Volumetric stability
- Safe for the tissues
- Natural, long-lasting cosmetic result
- Applicational versatility

*Technical data table.

* The 4:1 Acrytemp cartridge is compatible with the most common 4:1 and 10:1 dispensers.

ACCESSORIES

Prosthesis preparation

Investments

The Elite Vest line of investments is conceived to simplify the use of the investment in the laboratory and reduce stocks.

All the most common fixed and removable prosthesis applications can be covered with just two powders (one for fixed prostheses and one for frameworks) and a universal liquid.

PHOSPHATE INVESTMENTSElite Vest Plus80Elite Vest Cast80Elite Vest Liquid80

Prosthesis preparation / Investments

Just two types of powder and one universal liquid allow casts to be made with all alloys* and pressable ceramics.

Elite Vest Plus is the universal precision investment for fixed prostheses, compatible with non precious alloys*, precious alloys and pressable ceramics. Elite Vest Cast is a precision investment specific for frameworks, compatible with base alloys* and precious alloys. Elite Vest Liquid is the universal mixing liquid for both investments.

Characteristics

- Quick or traditional preheating
- Fine powder, carbon-free formulas with expansion adaptable to the working technique
- Excellent precision, particularly in implants and large bridges

Elite Vest Plus

Advantages

- Easy to use and manage: just two products for all types of work
- Flexibility: expansion can be adapted to the different needs
- Work speed: smooth alloy surface after preparation

Elite Vest Plus - cast metal coping

Elite Vest Plus

* excluding titanium alloys

Hygiene

Cleaning and disinfecting impressions coming from the dental surgery are a safeguard against infections. Choosing effective products with a broad spectrum of action is therefore essential to protect the health of laboratory technicians.

Quick acting easy-to-use products, free from toxic substances such as phenols and aldehydes. Like the products in the Zeta Hygiene range, developed from Zhermack's experience in the cold disinfection and sterilisation of medical-surgical devices. Comprehensive solutions, regulated by strict production standards and controlled and tested according to the most recent European regulations for an adequate protection every time.

Hygiene Hygiene lab applications

Solutions for impressions cleaning and disinfection and for the cleaning of alginate and gypsum residues on instruments.

Zeta 7 Spray | Zeta 7 Solution

Impressions disinfectants

Hygiene / Hygiene lab applications

Zhermack offers high performance products for impression disinfection: broad spectrum of action, according to the latest European Norms validated on disinfection, and high compatibility with different types of impression material.

Zeta 7 Spray is a ready to use disinfectant for a quick and easy disinfection of impressions.

Zeta 7 Solution is a broad spectrum concentrated disinfectant.

Characteristics

- Broad spectrum of action developed and tested according to the latest European Norms on disinfection
- Compatibility with materials for the impression taking (addition and condensation silicones, alginate, polyether, polysulphide and polyvinyl)

Advantages

- Efficacy: broad protection for professionals in dental practices and laboratories
- High performance: respects the dimensional stability of impressions characteristics and their compatibility with gypsum and improves accuracy in the reproduction of gypsum models

Zeta 7 Spray

Zeta 7 Solution

Product	Type of product	Active ingredients	Dilution	Action time	Distinctive characteristics	Spectrum of action
Zeta 7 Spray	Disinfectant	Quaternary		3:00	Improve smoothness of gypsum on impressions surfaces and reduce the formation of bubbles	Bactericidal: EN 13727 (S. aureus, P. aeruginosa, E. hirae) Yeasticidal: EN 13624 (C. albicans) Tuberculocidal: EN 14348, EN 14563 (M. terrae) Virucidal: EN 14476 (Poliovirus, Adenovirus, Parvovirus, Norovirus including HIV, HBV, HCV) Tests carried out in dirty conditions.
Zeta 7 Solution	Disinfectant			Its, 1 % 10:00 for the preparation of up to 100 litres of disinfectant		Bactericidal: EN 13727 (S. aureus, P. aeruginosa, E. hirae) Yeasticidal: EN 13624 (C. albicans) Bactericidal, Yeasticidal: VAH (30') Tuberculocidal: EN 14348 (M. terrae) Virucidal against enveloped viruses: EN 14476 (Vaccinia Virus including HIV, HBV, HCV) Tests carried out in dirty conditions.
